

Rehab and your GP

Enterprise Discharge Summary (EDS) – for Rehabilitation Clinicians

It is vital the Enterprise Discharge Summary (EDS) is completed in a timely manner, preferably on the day of inpatient discharge. Without this information being available, follow up and emergency care can be negatively impacted.

Further information, support and training (only on QH devices)

Key Information to include in the EDS

Contacts

- Please ensure that your EDS summary includes key contact numbers for the inpatient rehabilitation team and other relevant staff (i.e. Nurse Navigators). Ideally, provide a generic contact for your service. This means that the General Practitioner (GP) can easily contact relevant staff if they have ongoing questions.

Referral Pathways

- Please document any ongoing referrals in the EDS (i.e. Transition Care Program, Adult Community Health Services, Hospital in the Home) so the GP knows what services are going to be involved when the patient leaves hospital. This information can usually be found in the latest case conference documentation.
- As the EDS does not include any allied health reports, liaise with your team around sending these directly to the GP and include any pertinent information.

Plan

- Please include any specific tasks that you would like the GP to complete e.g. ordering blood tests.

Patient Goals

- Include goals and the GP's role in assisting with the patient achieving these.
